I have been a lecturer in economics in the Social Careers Department of the IUT of Reims-Châlons-Charleville, and affiliated to the Laboratoire Recherches en Économie Gestion Agro Ressources Durabilité Santé (REGARDS EA6292) since September 2023.

Prior to this, I held the position of temporary lecturer and research assistant until the end of February 2023, within the Faculty of economics, social sciences and territories (FaSEST), at the University of Lille, and affiliated to the Lille Centre for Sociological and Economic Studies and Research (Clersé-CNRS UMR8019).

While conducting my PhD research, I was successively PhD research fellow at the French Agency for Ecological Transition (Ademe), from 2017 to 2020, then temporary lecturer and research assistant at the Faculty of economics and social sciences (FSES), attached to the Clersé research centre, at University of Lille.

Research topics :

Fuel poverty — fuel poverty measure — vulnerability — publique action — socioeconomics — economics of conventions — ecological economics — mixed - method research

Education

2017–2022	PhD in economics <i>University of Lille</i>
2015–2017	Master Degree in economics — Public economy and management Course Public action, institutions and social and solidarity-based economy (APIESS) <i>University Lille 1</i>
2014–2015	Bachelor Degree in economics and management <i>University Lille 1</i>
2011–2014	Classe préparatoire aux grandes écoles (CPGE) — Field of study B/L (Literature and social sciences) <i>Lycée Faidherbe</i>
2011	French Baccalauréat général scientifique <i>École active bilingue Jeannine Manuel</i>

PhD thesis prizes

Prix Jacques Tymen 2023 awarded by the Association d'Économie Sociale (AÉS) awarded at the 42nd Journées de l'AÉS, Monday August 28 and Tuesday August 29, 2023 - *Économie sociale Territoires*, at the Université Perpignan Via Domitia University.

PhD thesis prize 2023 awarded by the International Network of Sustainable Development Organizations (RIODD) in partnership with Groupama Asset Management, awarded at the 18th RIODD Congress, on Tuesday 17, Wednesday 18 and Thursday 19 October 2023 - *Change or collapse*, at the University of Lille.

Distinction obtained during the PhD thesis

1st prize of the "Challenge Inter-Doctorants *Rev3 Energy Day*" organized on November 21, 2019, during the event "Recherche et entreprises : les enjeux énergétiques de la troisième révolution industrielle — Une manifestation des *Rev3 energy days* et du réseau Unirev3", at Artois University, campus of Arras.

PhD thesis

Defended on October 18, 2022 :

Characterization and management of fuel poverty in France.
An institutional economic analysis

The thesis was co-financed by the French Agency for Ecological Transition (Ademe) and the University of Lille. The thesis was carried out at the Clersé-CNRS (UMR8019) and the École doctorale Sciences Économiques, Sociales, de l'Aménagement et du Management (ED SÉSAM).

Committee members :

- Nathalie Lazaric, Senior Researcher at Côte d'Azur University (referee)
- Franck-Dominique Vivien, Professor at University of Reims Champagne-Ardenne (referee)
- Nicolas Postel, Professor at University of Lille (committee president)
- Patrick Jolivet, Head of Economics and Forecasting Department at Ademe (examiner)
- Florence Jany-Catrice, Professor at University of Lille (supervisor)
- Benoît Lallau, HDR Associate Professor at Sciences Po Lille (co-supervisor)

Abstract :

This thesis focuses on the energy access difficulties some households experience. Sometimes referred to as “fuel poverty”, sometimes “energy poverty”, these difficulties to access energy are complex to grasp by a single term. The co-existence of several terms echoes the diversity of themes which energy access refers to, in particular those of environmental inequalities and social justice. Does “energy access” stand for a purely technical issue related to production, distribution and supply activities? But in this case, how can we interpret the implementation of public action that does not relate to these activities? What about the notion of fuel poverty, currently used in France to allude to part of the public action? Fuel poverty has been defined in France since the Grenelle II law of 2010 as a situation in which a person is unable “to obtain the energy supply necessary to satisfy their basic needs due to the inadequacy of their resources or housing conditions”. This definition is rooted in an older institutional framework which was formed in the 1970s and 1980s and could be seen as one of the symptoms of the transition from Fordist capitalism to neoliberal capitalism. Is fuel poverty a particular category of social action or a new category at the crossroads of social and ecological issues?

This thesis questions the processes by which the difficulties of households in terms of energy access are enhanced into a collective problem on the social and ecological levels. Relying on academic, professional and legislative literature, we first show that resorting to fuel poverty as a category of public action is a way of materializing a collective response to certain difficulties of access to energy for households. However, it is insufficient to understand the structure of collective action. Indeed, it refers either to a collection of measures in several categories of actions (energy supply; access to rights and the fight against exclusion; housing renovation), or to a situation of risk that is incompletely defined. We set to enrich this notion of fuel poverty with that of vulnerability in order to consider of the situations of households with difficulties in accessing energy as a continuum from which risks are assessed and qualified as fuel poverty situations for households. We rely on the work of Olivier Godard and Robert Salais to understand, on the one hand, the links between the forms of coordination used to define and take charge of a social and environmental problem, and on the other hand, to express the articulation of different institutional and economic actors. Based on the analysis energy and financial living conditions of households, carried out with the tools of the European Union Statistics on Income and Living Conditions (EU-SILC) of 2017, we show that there are forms of insecurity for households, which are then (re)qualified at the institutional level. This plurality of institutional situations of households is examined using the analysis of semi-structured interviews conducted with institutional and economic actors claiming to be involved in the “fuel poverty policy”. We ultimately show that there are two forms of coordination from which institutional and economic actors evaluate households’ access to energy, dispatch households among themselves according to their tools to take care of the so-qualified “fuel poor” households, and organize their economic activities. The logics of these two forms are based on a market-civic compromise based on the figure of the solvent consumer and on an industrial-civic compromise based on the figure of the responsible consumer.
